

Healthcare Professional Profile

Comprehensive testing of healthcare professionals for highly addictive prescription drugs

The Healthcare Professional Profile (HPP) is suitable for pre-employment, post-accident, random and for-cause screening for

- > **Employers**
- > **Hospitals**
- > **Long-term care facilities**
- > **Pharmacies**
- > **Other licensed professional organizations**

The HPP offers

- > **Accurate and reliable results**
- > **Customized panels and specialized testing**
- > **Confirmation by GC/MS**

Comprehensive panels screen for a wide of range of prescribed drugs

Because of the potential of drug abuse by healthcare workers and the immense liability it brings to your organization, Quest Diagnostics has developed a comprehensive panel of tests for drugs that are readily accessible to professionals in the healthcare industry. The Healthcare Professional Profile (HPP) tests for a variety of prescribed drugs that currently pass undetected in conventional testing profiles of “street drugs,” such as marijuana, cocaine and amphetamines.

The initial screening of the comprehensive Healthcare Professional Profile (HPP-I, see reverse) is performed using immunoassay technology (specifically EIA and ELISA) for all analytes. This technology affords rapid turnaround times. Screening for any additional drugs not included in the comprehensive Healthcare Professional Profile (HPP-I) will be performed using GC/MS technology.

The HPP from Quest Diagnostics can

- Detect the abuse of available narcotics and sedatives in healthcare facilities.
- Reduce employee turnover due to drug abuse.
- Limit your liability by protecting your patients from impaired healthcare professionals.
- Reduce long-term costs to your facility caused by employee inefficiency.
- Maintain a high quality of patient care by deterring employees from taking these drugs and providing placebos to patients.
- Help reduce absenteeism, injuries, mistakes and theft.

The comprehensive Healthcare Professional Profile, HPP-I, contains all of the following components:

HPP-I

- | | |
|---|--|
| Amphetamines 1000 ng/mL screen | Opiates (Codeine, Hydrocodone, Hydromorphone, Morphine, Oxycodone and Oxymorphone) |
| Barbiturates 300 ng/mL screen | Benzodiazepines (Alprazolam Metabolite, Clonazepam Metabolite, Flurazepam Metabolite, Lorazepam, Midazolam Metabolite, Nordiazepam, Oxazepam, Temazepam and Triazolam Metabolite) |
| Cocaine Metabolite 300 ng/mL screen | Fentanyl, Meperidine, Tramadol |
| Marijuana Metabolite (THC) 20 ng/mL screen | TestSure™ Adulterant Panel (Nitrite, Chromates, Halogens, Oxidizing Adulterants, Creatinine, Specific Gravity, Acids, Bases and Glutaraldehyde) |
| Methadone 300 ng/mL screen | |
| PCP 25 ng/mL screen | |
| Propoxyphene 300 ng/mL screen | |

The following Healthcare Professional Profiles contain all of the above plus the add-ons listed below:

HPP-I A: *Urine Alcohol*

HPP-II: **Narcotics:** Buprenorphine and/or metabolite, Butorphanol Metabolite, Dihydrocodeine, Nalbuphine, Pentazocine
Other Drugs: Flunitrazepam Metabolite, Ketamine Metabolite, Meprobamate, Zolpidem

HPP-II A: **Narcotics:** Buprenorphine and/or metabolite, Butorphanol Metabolite, Dihydrocodeine, Nalbuphine, Pentazocine
Other Drugs: Flunitrazepam Metabolite, Ketamine Metabolite, Meprobamate, Zolpidem
Plus Urine Alcohol

HPP-III: **Narcotics:** Buprenorphine and/or metabolite, Butorphanol Metabolite, Dihydrocodeine, Nalbuphine, Pentazocine, Naltrexone Metabolite
Other Drugs: Flunitrazepam Metabolite, Ketamine Metabolite, Meprobamate, Zolpidem, Dextromethorphan (>10,000 ng/mL)

HPP-IV: **Antidepressants:** Amitriptyline, Nortriptyline, Fluoxetine, Sertraline
Antihistamines: Chlorpheniramine, Diphenhydramine, Doxylamine
Stimulants: Diethylpropion, Ephedrine, Fenfluramine, MDA, MDMA, Methylphenidate, Nikethamide, Phendimetrazine, Phenmetrazine, Phentermine, Phenylpropanolamine, Pseudoephedrine

HPP-V: **Narcotics:** Buprenorphine and/or metabolite, Butorphanol Metabolite, Dihydrocodeine, Nalbuphine, Pentazocine
Other Drugs: Flunitrazepam Metabolite, Ketamine Metabolite, Meprobamate, Zolpidem
Antidepressants, Antihistamines and Stimulants (See HPP-IV for full list.)

HPP-V A: **Narcotics:** Buprenorphine and/or metabolite, Butorphanol Metabolite, Dihydrocodeine, Nalbuphine, Pentazocine
Other Drugs: Flunitrazepam Metabolite, Ketamine Metabolite, Meprobamate, Zolpidem
Antidepressants, Antihistamines and Stimulants (See HPP-IV for full list.)
Plus Urine Alcohol

HPP-VI: **Narcotics:** Buprenorphine and/or metabolite, Butorphanol Metabolite, Dihydrocodeine, Nalbuphine, Pentazocine, Naltrexone Metabolite
Other Drugs: Flunitrazepam Metabolite, Ketamine Metabolite, Meprobamate, Zolpidem, Dextromethorphan (>10,000 ng/mL)
Antidepressants, Antihistamines and Stimulants (See HPP-IV for full list.)

Quest Diagnostics – Meeting All Your Drug Testing Needs

The Healthcare Professional Profile is specifically designed to test healthcare workers for highly addictive and readily available prescription drugs. For more information, call 1-800-877-7484, contact your Employer Solutions representative or visit us at www.employersolutions.com.
